Introduction :

This project is part of the Digital Literacy course (CSE0001) at VIT Bhopal University. As part of this assignment, I worked as a Student Digital Ambassador and completed a series of tasks designed to develop essential digital skills.

The project focuses on building awareness about digital tools, creating a professional online presence, understanding communication etiquette, and learning about online safety. All activities are organized into five modules, each covering a specific aspect of digital literacy.

Task -01 (Info Graphic)

I created my digital literacy poster using Canva, which is an easy-to-use online design tool. It allowed me to add text, colors, and visuals in a simple and organized way. My design main aim on spreading awareness about safe internet practices, email etiquette, and the importance of being digitally literate. I included sections like “What is Digital Literacy?”, “Safe Internet Practices,” and “Email Etiquette” in box to make the information clear and easy to understand. I also used icons and visuals such as a phone, hacker image, and symbols to make the poster more engaging and visually appealing.

One thing I found interesting while making this poster was how design elements like colors and text placing can affect readability and attention. Choosing the right mix of colors and placing content properly made a big difference in how the poster looked. However, I found it little bit difficult to balance the text and visuals without making the design look croded and . In short, this task helped me understand both digital safety concepts and basic design skills.

Task -02 (Digital Portfolio)

In this task, I created and updated my profiles on GitHub, LinkedIn, and Stack Overflow to establish a professional digital presence. GitHub was used to showcase my coding-related activities and to create a profile
README highlighting my academic background and interests. LinkedIn was used to present my educational details and connect with a professional network. Stack Overflow was chosen to explore Doubts and coding problems

Each platform has its unique feature: GitHub is useful for project development and version control, LinkedIn helps in networking and job opportunities, and Stackoverflow supports learning. Over the next four years, I plan to actively use GitHub to build and show my projects, LinkedIn to connect with professionals and explore internships and job roles, and Stackoverflow to improve my problem solving skills. This task helped me understand the importnce of maintaining a clean and profesional digital identity.

Task 3 – Platforms

In this task, I explored both coding practice platforms and collaboration tools. For coding practice, I used HackerRank and completed a beginner-level problem. This helped me knowing how coding platforms work and how they can be used to improve problem solving skills.These platforms provide good challnges that are useful for building logic

and preparing for technical interviews

These platforms are highly useful in an academic area. Coding platforms help in improving programming skills, while tools like Google Forms support surveys, quizzes, and collaborative work. This task improved my understandin with online tools that are essential for both learning and collaboration.

For collaboration, I created a Google Form titled “Digital Literacy Awareness Quiz” consisting of five questions, including multiple-choice and short-answer types. I also linked the form to a Google Sheet to collect responses. This activity helped me understand how digital tools can be used for data collection.

Task 4 – Email Etiquette

In a workplace a team working on a project used email a lot to organize what the project team had to do. One person on the project team did not understand a message about when something was due for the project. The message was not clear so they thought they had time to do the project work. As a result they turned in their work late which delayed the project and upset the project team members.

The problem happened because the message was unclear and nobody checked if everyone on the project team understood the message. This could have been avoided if the message clearly stated when tasks were due for the project team. It would also have helped if someone confirmed that everyone on the project team understood their project responsibilities.

A video call or chat would have been better for project discussions to avoid confusion among project team members. When communicating digitally project team members need to be clear respond quickly and choose the method for the project. The project team must ensure everyone is on the page about the project. Effective digital communication is crucial, for a project teams success.

Task 5 – Cybercrime Awareness

In this task, I studied UPI-based payment fraud, which is a common cybercrime in India. I learned how scammers trick users into approving payments by sending fake requests or links. One surprising aspect was how easily users can be tricked into sharing sensitive information like passwords due to lack of understanding. This task made me more aware about online transactions and digital security. One habit I will adopt is to always verify payment requests and i will never share my UPI pin with anyone. Understanding cyber threats and prevention methods is important for safe usage, and this task helped to understand online behavior.

Conclusion

This project provided a clean and clear understanding of digital literacy and its practical applications. Through given tasks, I developed skills in visual communication, professional profile building, coding practice, digital collaboration, and online safety. The project gave me good understanding of the importance of maintaining a responsible digital presence and communicating effectively in professional fields. It also showed the risks associated with cybercrime and the need for awareness and preventive measures. Overall, this project has booosted my confidence in using digital tools and prepared me for future academics and professional roles.
